For Immediate Release

InduSoft HMI and SCADA Software Runs On Windows CE 3.0

**InduSoft makes it possible for embedded HMI computers
to have web access.**

AUSTIN, TEXAS - August 21, 2000 - InduSoft's SCADA, HMI, monitoring and control software is compatible with Microsoft's latest release of the Windows CE operating system, version 3.0. Because InduSoft's latest WEB Studio software is XML-enabled, CE-based embedded computers can now be accessed over the Internet. This means that users with handheld, laptop or desktop devices can monitor and control applications directly, using standard Web browsers. The InduSoft suite of products includes Studio and WEB Studio PC-based development systems, both of which allow an end user at a desktop PC or server to configure an HMI, SCADA, process control, automation or data acquisition application, and then download the application to a wide range of desktop, industrial, embedded, laptop, handheld or palm computers and thin clients running Windows NT, 2000 or CE.

InduSoft Studio is a complete supervisory control, process monitoring and operator interface software package for the Windows environment. It includes an object oriented database, math functions, data logging, trending, report generation, archiving, alarms, batch recipes, and interfaces to PLCs, remote I/O, serial and Ethernet networks.

WEB Studio offers the same HMI, control and data acquisition functions as Studio, but it can also import and export data in XML, thus making an application Web compatible. It allows a user with a standard web browser to monitor and interactively control an application.

"We have been running InduSoft Studio and WEB Studio on Microsoft's Beta versions of CE 3.0 for months, and we are currently running them on handheld and palmtop computers," says Ernest T. Roland, president of InduSoft. "Like everyone else in the automation and process control industry, we are waiting for the hardware companies to produce industrial computers equipped with Windows CE 3.0."

InduSoft Studio and WEB Studio software are available as private-label HMI and SCADA packages from several well-known OEMs, and they are widely used around the world. At present, InduSoft has sold 4,000 site licenses.

ABOUT INDUSOFT

Founded in 1997, InduSoft provides a powerful family of industrial software products for developing applications in process supervision, automation and control for Windows 2000, NT and CE operating systems. Today, InduSoft is developing tools and technologies to empower people and companies to develop graphical interfaces, integrate Web browsers, and take advantage of Internet connectivity. More than 4,000 InduSoft HMI, SCADA, control and data acquisition systems are operating worldwide.
